

IPL PHOTO REJUVENATION

Q. What are the benefits from our IPL facial treatment?

A. Reduction in ***Fine lines and wrinkles*** caused by aging or sun damage, ***Redness, Freckles, Brown pigmented spots, Broken capillaries, Large open pores, Acne*** etc.

Q. Do I need any preparation prior to this IPL facial?

A. *Very little preparation is required because this treatment is non-invasive. Two important preparations are **avoiding sun exposure** and **taking a patch test**. For about 3-4 weeks before and after the IPL treatment, it is important to avoid sun exposure and to wear sunscreen. This treatment makes the skin more sensitive to the sun. Failure to properly protect from the sun may result in further skin damage. A patch test is required on your **first** visit. Some may have a photo-sensitivity issues. The patch test can be done together with our free consultation. An actual treatment will be done a few days after the patch test when no problems are identified on the area tested.*

If you have any enquiries about the IPL treatment,

Please call us for a free consultation on (08) 9328-4848.
